

IP PHONE SYSTEMS

Atlas's suite of products and solutions allow you to take advantage of expert insight to reduce your expenses and increase your company's communications efficiency.

HOSTED SOLUTIONS

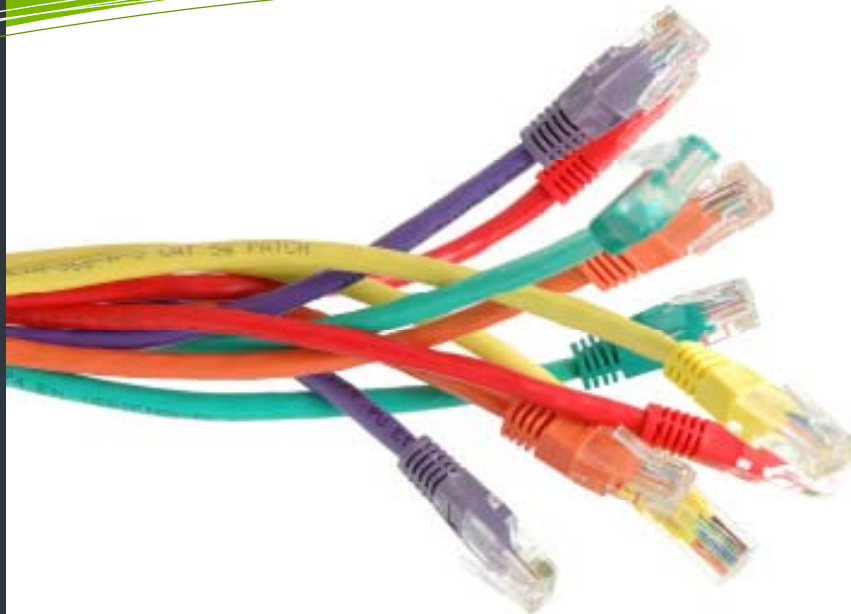

Atlas hosted VoIP service gives you the confidence to conduct your business knowing that your communications solution is reliable, cost efficient and will transition seamlessly as your company expands.

FEATURES

The most popular Asterisk®-based distribution in the world, trixbox CE provides a web-based interface to configure and manage a complete IP-PBX system.

EQUIPMENT

Atlas VoIP phone systems are hardware independent. No proprietary equipment is required. Use common servers available from mainstream manufacturers or ready-to-run appliances.

Voice Over IP (VoIP) Phone System Solutions

Atlas offers a vast array of telecom solutions ranging from simple phone systems to complex integrated network backbones. We specialize in the sale, service, and support of cutting-edge telecommunications systems and products. We will work closely with you to develop the optimal arrangement for your telecommunications needs—and we'll be there to help you support it once it's in place.

Atlas has established working relationships with several telecommunications carriers that allow us to offer discounted, tailor-made telecom solutions that mirror each customer's specific business needs. Each customer is unique, and the services and products that they require must be chosen strategically.

Atlas works with each customer on an individual basis in order to determine the optimal arrangement for their telecommunications system. We take pride in service as the bridge between customers and our telecommunications partners to build working relationships that benefit both.

Atlas's suite of products and solutions allow you to take advantage of expert insight to reduce your expenses and increase your company's communications efficiency. Our ability to do that derives from our strong industry relationships and extensive expertise.

IP Phone Systems

Business telephone systems have seen significant advances in technology that offer many new calling features, lower up-front costs and reduced maintenance and support. Don't buy another legacy PBX or key telephone system before talking with our staff about all of the current options. We have researched and selected best-of-breed hardware and software solutions.

IP-based telephone systems consist of a control unit and IP desk phones. The entire phone system runs over the Local Area Network (LAN). Each IP desk phone has two ethernet ports, one for the network connection and a second port that can be used to connect a desktop computer, printer or switch. This allows the desk phone and desktop computer to share one ethernet cable back to the ethernet switch. Since the phones are plugged into the LAN, it is easy to move phones from room to room without having to reprogram the system.

Benefits

SAVE MONEY ON PHONE LINES

IP-based PBXs just like legacy PBXs and key systems can use traditional phone lines such as analog POTS or PRI lines or advanced IP-based delivery using SIP trunks. Save money and get advanced telephone features by ordering SIP trunks for your IP-based phone system.

REDUCE CABLING COSTS

Unlike legacy PBXs that require their own wiring to connect proprietary desk phones to the control unit, IP-based telephone systems run over the same LAN infrastructure that your PC's and servers use. By consolidating your wiring infrastructure, you save money and reduce complexity. IP-based desk phones can be line powered just like their legacy PBX counterparts by using power-over-ethernet (POE) capable network switches.

WORK FROM ANYWHERE

Work from where you want when you want with ease. You can take desk phones off-site and by connecting them to any broadband connection, they function from home or a remote location exactly like they would from the office. Cut the cord and work from anywhere that you have a broadband Internet connection!

REDUCE THE COSTS ASSOCIATED WITH MOVES, ADDS AND CHANGES

One of the most significant advantages of an IP-based PBX from Atlas is their simple web-based configuration and the low cost of Moves, Adds and Changes. Traditional PBXs and key systems require special programming or rewiring by the phone system vendor or technician in order to move a user from one room to another. The end user configuration follows the phone no matter where you plug it into. Stop paying time and materials for Moves, Adds and Changes to your phone system!

IP PHONE SYSTEMS

Atlas's suite of products and solutions allow you to take advantage of expert insight to reduce your expenses and increase your company's communications efficiency.

HOSTED SOLUTIONS

Atlas hosted VoIP service gives you the confidence to conduct your business knowing that your communications solution is reliable, cost efficient and will transition seamlessly as your company expands.

Atlas hosted VoIP service gives you the confidence to conduct your business knowing that your communications solution is reliable, cost efficient and will transition seamlessly as your company expands. Hosted PBX for business provides remarkable savings, privacy, convenience, mobility and reliability. A flawless communication system that delivers in real time is essential to increased productivity.

Benefits

The hosted VoIP technology is capable of handling functions that free you and your employees to accomplish other necessary tasks, reducing your overhead costs. Using a hosted PBX solution allows your business to:

- Remain current with leading edge technology
- Avoid the burden of expensive, obsolete equipment
- Work optimally with lower cost Business Grade DSL internet service
- Benefit from the high quality of service for voice and data delivery
- Have the support customer care technicians available to you 24/7

Most businesses function using public Internet and can struggle with low levels of bandwidth and data transfer speeds. You may also be dealing with rogue computers and viruses that affect the quality of VoIP service you are receiving. Velocity understands networks and has the expertise to engineer a solution that is a custom fit for your small or mid-size business. A hosted PBX VoIP solution has all the right advantages because:

- We provide the bandwidth using our own circuits
- The potential for weak or interrupted service due to equipment failure is removed
- You are no longer at the mercy of unknown factors beyond your control
- You have more cost effective bandwidth options
- You have the option to choose the number of lines, extensions and features that will best support your business requirements.

You can easily transfer satellite and remote office systems to come together in a unified hosted VoIP solution without high capital expenditures and replacing expensive equipment. All of your voice and digital communications data can be consolidated into a simple, intuitive, user-friendly format, saving you money and giving you the time to focus on the growth of your business.

CLICK TO DIAL FROM OUTLOOK

When you are in Microsoft Outlook, you can initiate a call to someone either from within your contacts or from your inbox if the sender's address is in your Outlook contacts.

RECEIVING AN INBOUND CALL

On an inbound call, the caller ID information is matched to the contacts in your Microsoft Outlook contacts. If there is a match, the caller's information is displayed in a call status box that appears on your screen.

COMPUTER BASED SOFTPHONE

One of VoIP's key advantages is that a telephone no longer has to be -- or even look like -- a traditional telephone. In fact, just about any PC, laptop, or PDA can be turned into a telephone simply by adding softphone software.
